# QUARVURA

## Brand Identity & Packaging System

Building a cohesive, gift-worthy packaging experience under real-world constraints.

A natural crystal collection for the U.S. Amazon marketplace. I led naming and visual identity development, material research, packaging design, supplier coordination, and production refinement.

| | |
|---|---|
| NAMING / IDENTITY | ~60-100 names; preliminary trademark screening. Q mark refined through 11 iterations for print, foil, and embossing. |
| ROLE | Independent project lead / Brand & packaging designer |
| MARKET | United States / Amazon |
| COST TARGET | ≤ RMB 10 per set |

ORIGINAL ASSET NEEDED

Complete packaging set

Original product + packaging photograph / landscape

# Three routes, five criteria

Packaging directions were compared against protection, perceived quality and visual cohesion, cost efficiency, production feasibility, and unboxing experience.

A

## Essential

Pouch, protective wrap, kraft box, and basic printed inserts.

Low-cost and easy to source; less distinctive as a gift.

B

## Premium Gift

Rigid drawer box, branded pouch, tissue, and foil details.

High presentation value; more cost, volume, and production complexity.

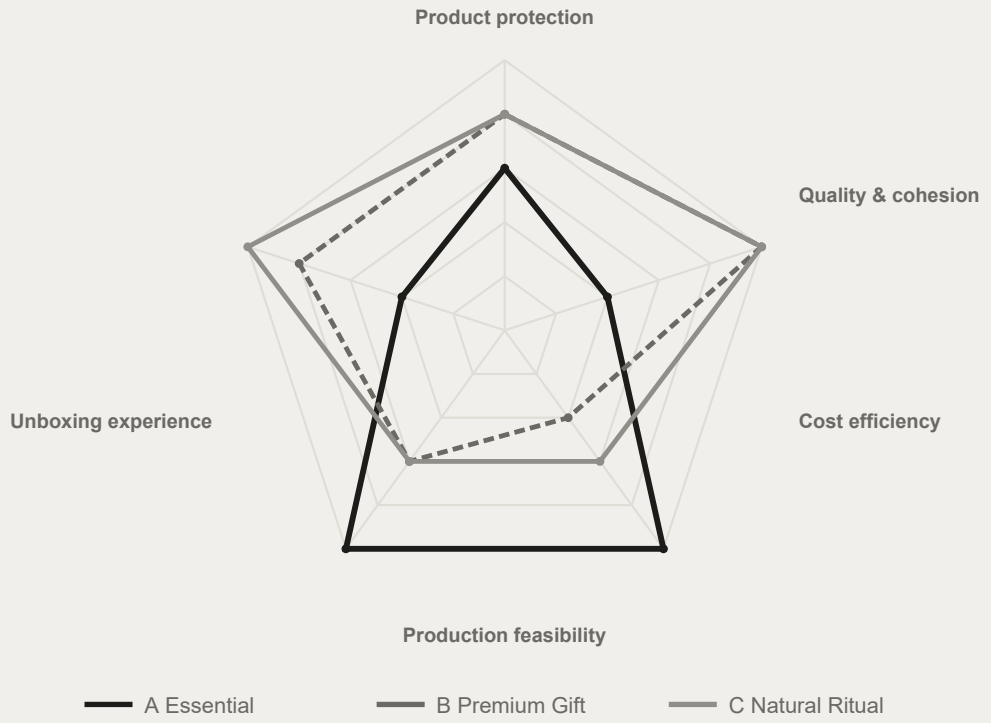

C

## Natural Ritual

Product-specific pouches, coconut bowl, honeycomb wrap, and raffia.

Selected for a more coherent, layered unboxing experience.

**QUALITATIVE CONCEPT COMPARISON**

1 = low / 5 = high. Scores are comparative design judgments, not test results. Cost rankings require final supplier quotations.

# A layered packaging experience

Each component has a clear role in protection, organization, and presentation.

ORIGINAL ASSET NEEDED

Open package / overhead view

Original photograph showing all layers in order

01 TOP LAYER

## Brand card

Brand communication

02 PROTECTIVE LAYER

## Honeycomb paper

Cushioning and surface protection

03 PRODUCT ARRANGEMENT

## Coconut bowl / snap pouch / mesh pouch

Display, bracelet protection, crystal storage

04 BOTTOM + OUTER STRUCTURE

## Raffia filling / corrugated mailer

Cushioning, texture, and containment

OTHER PRODUCT VARIATIONS

Raw crystal set: individually protected stones + canvas pouch
Tumbled crystal set: individually protected stones + microfiber pouch

# Designed for production

Supplier feedback and material behavior informed the final refinements.

ORIGINAL ASSET NEEDED

Early card design

Original design iteration / before

ORIGINAL ASSET NEEDED

Refined card design

Original production-ready iteration / after

ORIGINAL ASSET NEEDED

Physical package in use

Original production photograph / packaging detail

**PRODUCTION REFINEMENT**

Decorative card borders proved difficult to reproduce consistently in small batches. After supplier feedback, I simplified the layout and removed a border where trimming variation could be visible.

**AI-ASSISTED EXPLORATION**

AI-assisted concept generation helped explore the seven-chakra card, but often introduced incorrect symbol counts, color sequences, or duplicated text. I refined the constraints and corrected the final design manually in Photoshop.

**REFLECTION**

I moved from individual graphics to a system shaped by material behavior, cost limits, and production tolerances.

**NEXT: verify final unit cost and run standardized transit testing.**
